

COMPONENT CABLE DROP MATERIAL

Description

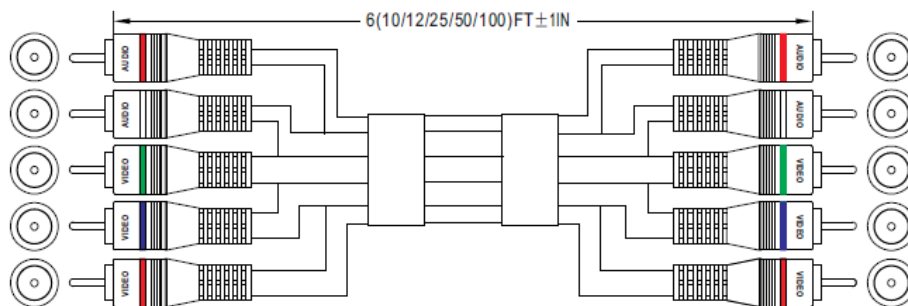

These premium audio and video cables are designed and built to be equal or superior to the highest quality cables on the market today. 100% quality testing and extraordinary attention to detail ensures superior performance today and in the future.

Characteristics

- It has a soft flexible PVC jacket made from new, not recycled, material that will not deteriorate or crack over time.
- The cables use a PVC bonding knuckle to prevent the cables from splitting apart, a common problem for this type of design.
- The specially developed RCA connectors provide superior connection and tension strength compared with more conventional designs.
- Gold plating provides better connectivity and resistance to oxidation over time, for more reliable operation.
- 95% pure copper braiding provides better isolations from unwanted interference, while greatly enhancing structural integrity and strength.
- Proper design guarantees proper performance. Audio cables are designed for maximum audio performance. Video cables for maximum video performance.
- From start to finish a superior product to the low quality "clones" offered in the marketplace that have dubious long term performance and operation.
